## **Using State Records - Oracle**

State records are used in Application Engine programs to keep track of useful information through the life of a program. PeopleSoft uses the concept of a record (table) to store this information. The scope of data in a state record is global to an application engine program (and other programs that share the state

# Get Free Application Engine State Record

record). The naming convention of state records is to end with the suffix `_AET`. They can either be a derived/work record or a SQL table.

## **State Records | PeopleSoft Wiki**

State records are used in Application Engines as a storage location for data that needs to be passed across actions.

## Get Free Application Engine State Record

An Application Engine can have more than one state records (a maximum of 200) associated with it out of which only one can be marked as a default state record.

### **PeopleSoft State Record - PSoftSearch**

You can think of the state record as the
