same share as the users' HOME directories, set the path to the user store as #homeDirectory#\profiles.

Share Citrix user profiles on multiple file servers

With the Citrix streamed user profiles feature, files and folders contained in a profile are fetched from the user store to the local computer only when they are accessed by users after they have logged on. Registry entries and any files in the pending area are exceptions. They are fetched immediately.

Stream user profiles - Citrix Docs

Citrix User Profile Management is a profile type that supersedes all other profiles for the user and is a unique type of profile. It addresses "last write wins" wins issues by only capturing the changes and recording those changes within the profile, rather than writing the entire profile at logoff.

Profile bloat and logon speed – Profile bloat creates unwieldy growth in user profiles and resulting storage and management issues. Typically during logon Windows copies the user's roaming profile over the network down to the local machine. Logon time is prolonged by the time it takes to transfer the whole profile over the network.
