A plant's known cold hardiness is then used to assign it to one of these climate zones, to guide the purchases of plants that will survive winter temperatures in your area. This zone represents the lowest temperatures that the plant can endure and be expected to emerge from dormancy in the spring.

### USDA Zones | American Conifer Society

I'm examining a new book for me called 'Conifer Cold Hardiness' and the basic overall synopsis is that tissue of buds and wood needs to be hardened off before it is subjected to "winter winds." Furthermore, a chart is listed for cold hardiness and Sequoiadendron giganteum falls into a maximum threshold of -4 F or -20 C (USDA Zone 7) for this particular Genus.

### 'Conifer Cold Hardiness' pp. 13-21

Zone 4 regions of the country get pretty cold, with winter temperatures sinking well below 0 degrees Fahrenheit. Yet, many conifers thrive in this zone, including cold hardy juniper plants. They grow in many regions of the nation, thriving in zones 2 through 9. Junipers have many plus factors in addition to their delightful foliage.

### Cold Hardy Juniper Plants: Growing ... - Gardening Know How

Not only are they often very cold hardy, they stay green through even the deepest winters, bringing color and light to the darkest months. Zone 5 may not be the coldest region, but it's cold enough to deserve some good evergreens.
