International Conference on Differential Geometric Methods in Theoretical Physics are congresses held every few years on the subject of Differential geometric methods in Theoretical physics. Lectures, seminars, and discussions are held in different universities throughout the world, every few years, and a book compilation is published thereafter consisting of the papers submitted and discussed at the conference.

Geometrical optics can be considered as a limiting case of the wave optics based on partial differential equations of electrodynamics. Wave optics reduces to geometrical optics in the limiting case when the wavelength  $\lambda$  tends to zero. Geometrical wave theory can be considered just the opposite limiting case, when  $\lambda$  tends to infinity.. In wave optics there is a diffraction region between the ...

The effects of initial geometric imperfection and pre- and post-buckling deformations on vibration of isotropic rectangular plates under uniaxial compressive in-plane load have been studied. The differential equations of plate motions, using the Mindlin theory and Von-Karman stress-strain relations for large deformations, were extracted. The solution of nonlinear differential equations

Differential geometry is a mathematical discipline that uses the techniques of differential calculus, integral calculus, linear algebra and multilinear algebra to study problems in geometry. The theory of plane and space curves and surfaces in the three-dimensional Euclidean space formed the basis for development of differential geometry during the 18th century and the 19th century. Since the late 19th century, differential geometry has grown into a field concerned more generally with the geomet
