How Do You Find The

Any time you have the coordinates of a single point on your line, you can substitute those x and y coordinates for the x and y in your line equation. Do this for the equation you've been working on. Example 1 (cont.): The point (3,4) is on this line. At this point, $x = 3$ and $y = 4$. Substitute these values into $y = 2x + b$:
 $4 = 2(3) + b$

3 Ways to Find the Y Intercept - wikiHow

You can find the GCF in two ways. The first option is to list all the factor pairs of the numbers and choose the largest factor that appears in both (or all) the lists. The other method uses prime factors, which I discuss in the preceding section. Here's how to find the GCF: Decompose the numbers into their prime factors.

To find the number of neutrons, you will first need to find the atomic mass. An element's atomic mass (also known as the atomic weight) is the weighted average mass of atoms of an element. The atomic mass can be found underneath the symbol for the element. Make sure that you round the atomic mass to the nearest whole number.

How to Find the Number of Protons, Neutrons, and Electrons

To calculate the circumference of a circle, use the formula $C = \pi d$, where "C" is the circumference, "d" is the diameter, and π is 3.14. If you have the radius instead of the diameter, multiply it by 2 to get the diameter. You can also use the formula for circumference of a circle using radius, which is $C = 2\pi r$.
