MAT 232 is an introductory course in mathematical reasoning in multi-step problems across different areas of mathematics. The goal is to use elementary mathematical tools to solve more complex problems in already familiar areas of study such as precalculus, basic number theory, geometry, and discrete mathematics, instead of teaching new mathematical tools that are used in straightforward one-step exercises.

For every pair of integers x and y, if $x = y$, then $y = x$. (That is, equality is symmetric.) For any integers x, y, and z, if $x = y$ and $y = z$, then $x = z$. (That is, equality is transitive.) (The integers form a subset of the set R of real numbers. The set R should be familiar to you from your study of calculus.
