Munkres - Topology - Chapter 1 Solutions Section 3 Problem 3.2. Let C be a relation on a set A . If $A \neq \emptyset$, define the restriction of C to $A \setminus \{a\}$ to be the relation $C \setminus \{(a, b) \mid (a, b) \in C\}$. Show that the restriction of an equivalence relation is an equivalence relation. Solution: Let C_0 be the restriction of C to $A \setminus \{a\}$. As an initial matter, clearly if $(a, b) \in C_0$, then $(a, b) \in C$. Further, if

Section 1: Problem 3 Solution. Working problems is a crucial part of learning mathematics. No one can learn topology merely by poring over the definitions, theorems, and examples that are worked out in the text. One must work part of it out for oneself. To provide that opportunity is the purpose of the exercises. James R. Munkres.

U then there is a neighborhood W of x which is disjoint from $\pi^{-1}(C)$. Thus The tube lemma says that $\pi^{-1}: X \times Y \rightarrow X$ is closed when Y is compact (so that π^{-1} is an example of a perfect map [Ex 26.12]). On the other hand, projection maps are always open [Ex 16.4]. Ex. 26.8.
