Interest in using very high doses of vitamin C as a cancer treatment began as long ago as the 1970s when it was discovered that some properties of the vitamin may make it toxic to cancer cells. Initial studies in humans had promising results, but these studies were later found to be flawed.

High-dose vitamin C: Can it kill cancer cells? - Mayo Clinic

Abstract. The activating enzymes convert the prohormone, vitamin D, into the major circulating form, 25-hydroxyvitamin D (25(OH)D), and then to the hormonal form, 1,25-dihydroxyvitamin D (1,25(OH) 2 D). The two enzymes involved, known as the vitamin D 3-25-hydroxylase and the 25(OH)D 3-1 α -hydroxylase, are located primarily in the liver and kidney. Both enzymes are cytochrome P450s (CYPs) and ...

Vitamin D | ScienceDirect

Vitamin D is a fat-soluble vitamin that plays an important role in bone metabolism and seems to have some anti-inflammatory and immune-modulating properties. In addition, recent epidemiologic studies have observed relationships between low vitamin D levels and multiple disease states. Low vitamin D levels are associated with increased overall and cardiovascular mortality, cancer incidence and ...
