For example, a FHD webcam has a resolution of 1920×1080 and it can capture up to 2073600 pixels or 2.0736 megapixels, rounded off as 2MP. Camera resolution and its quality Even if the resolution is an important property of the camera, this does not mean that the higher the resolution, the better the image quality.

## **Webcam Resolution | Webcam Test**

The webcams we compared top out at 1080p, which is high enough to create clear, detailed pictures. However, because of how much it costs to build webcams with that kind of quality, most less expensive models have lower resolutions. Webcams at lower price points more commonly shoot 720p video. Similarly, lower price models shoot at slower frame rates.

or more cameras. Choose the cameras from the list of the left then press compare. The results will be displayed in a new window, so please make sure that you temporarily disable any popup blockers that you may have.

### **Side-by-side camera comparison - Digital Photography Review**

Resolution is simply a way to measure the size of the video being produced. Smaller images produce low resolution video, larger images produce HD or high definition video. It really is that simple, the larger the image being recorded, the higher the resolution and quality. Resolution is measured in pixels.
